

Academic Open Access publisher MDPI celebrates its 25th anniversary

The Multidisciplinary Digital Publishing Institute (MDPI) is a pioneer in open access publishing and was founded in Basel, Switzerland, in 1996. Even after 25 years, the publisher continues to work towards making the latest research and scientific knowledge accessible to anyone around the world, while offering open and useful services for all researchers and institutions. 2019 saw the establishment of the Japanese branch, currently employing 11 staff, all working to help and develop services for Japanese academic community.

(1) Rigorous peer-review and speedy publishing

At MDPI, the entire publication process (submission, peer-review, revision, English editing, proofreading, layout, and publishing) is all managed using our proprietary editing platform, allowing for rigorous and speedy peer-review and publication (37 days on average from submission to publication). Furthermore, more than 3,500 MDPI staff around the world work tirelessly to support our various authors, reviewers, and editorial committee members.

(2) English proofreading services

MDPI offers two levels of English editing: “regular” English editing where grammar and spelling are corrected by our native English-speaking editing team, and “specialist” English editing where, on top of the regular editing, experts specialized in the field checks all the technical terms. For a 3,000 word manuscript, regular editing costs around 20,000 yen (completed in 2 business days), and the specialist editing costs around 35,000 yen (completed in 4 business days).

(3) Japanese support for various services

The fully Japanese-speaking staff of the Japan MDPI office is happy to answer any questions you may have regarding the publishing process, MDPI services, printing, sponsorships, webinar hosting, and more. It is also possible to immediately get an update on the processing status of submitted papers.

Water is an international open access journal that covers all water-related science and technology, resource management, and policy. Published academic papers have dealt with water quality science, hydrology, water resource policy, water disaster countermeasures, limnology, and much more. With its steady increase in publication and citation numbers since its first issue release in 2009, *Water* has grown to become a globally-recognized journal, affiliated with the American Institute of Hydrology (AIH), International Conference on Flood Management (ICFM), Stockholm International Water Institute (SIWI) and the Polish Limnological Society (PLS).
